[Note from the chair: the title of the following course was approved at our 12/14/04 meeting as "Special Topics in Sociology and Human Rights". However, at that meeting we also tabled a similar course from the Philosophy department after failing to agree on the exact title, in order to obtain feedback from those involved in developing the Human Rights program at UConn regarding the general title for such courses. After several e-mail exchanges between myself and Paul Bloomfield, Arnold Dashefsky, Richard Wilson, and Davita Glassberg, we have agreed that "Topics in ..... and Human Rights" would be the most appropriate title for such variable topics courses, including SOCI 292. Since the committee wished such feedback, it is appropriate to modify this title.]

description will simply serve as a temporary guide in the catalog pending approval of new
Geosciences major

Geology and Geophysics

Geology integrates biology, chemistry and physics in the study of the Earth's history and
composition as recorded by rocks, fossils, and landscapes. Geophysics uses the methods of
mathematical physics to investigate the Earth's interior through the analysis of earthquake energy
and measurement of electromagnetic, gravitational, and thermal fields. Together, geology and
geophysics provide the tools needed for the exploration for mineral and energy resources, for the
monitoring and remediation of environmental contaminants in soil, sediment, and groundwater
and for the study of earthquakes, volcanic eruptions, floods and other natural phenomena that
pose a hazard to human life. The challenge of geology and geophysics is to understand our planet
and its history, and to use that knowledge to forecast its future in an era of global change.

The Geology & Geophysics Program is administered by the Center for Integrative Geosciences.
Until the new undergraduate course of studies for this Program is approved (anticipated Fall
2006 or 2007), students interested in geosciences may pursue a course of studies with a
foundation in geology and geophysics through the Individualized Major program. Faculty
associated with the Center (located in Beach Hall) are available to provide information and for
advising. For further information and application forms, contact the Individualized Major
Program Director at (860) 486-3631.
