Action: The motion was tabled until the fall semester to allow for further discussion.

4. Online courses. A. Skoog raised questions about whether online courses needed specific approval, and if so by whom? There is no obvious policy. T. Terry pointed out the committee had discussed this issue a year ago, but had not developed a formal policy.
Minutes from Feb. 10, 2004 include the following summary: “The following issue had been on the committee’s agenda, for several meetings, but had been postponed due to other pressing business:

B. UConn is entering into the business of providing online course offerings. What should be the procedure for online courses developed through Continuing Studies? Should they require departmental approval? College C&C approval? Is the online version essentially the same in content as the traditional course or is it different? Does CLAS wish to examine this issue and develop such a policy? This issue was discussed at the close of the meeting.

The issue was discussed for about 15 minutes. Committee members who had offered online courses shared their experiences and concerns. Several people suggested that some level of oversight by CLAS would be desirable, but there was no immediate consensus on the form this might take. It was suggested that departments currently exert some level of oversight, since courses offered through Continuing Studies (including online courses as well as other summer and intersession offerings) are proposed and taught only with departmental approval. The committee asked Veronica Makowsky to find out how many online courses had so far been offered. The committee was also interested in knowing more about UConn’s policy regarding ownership of online course materials.

It was suggested the CC&C should appoint a subcommittee next fall to study this issue and develop a CLAS policy regarding oversight for online courses.

PART 1

The first group of core courses introduces students to the basic subdisciplines of geosciences that address the solid Earth. These are paleontology, stratigraphy, geochronology, geomorphology, sedimentology, structural geology, tectonics, geophysics, mineralogy, and petrology. The second group of core courses provides students with knowledge and skills central to one of three applied fields in the geosciences: shallow-level geophysics, engineering and environmental geology, and hydrogeology. The third group of core courses introduces students to spatial analysis, which is a fundamental technique in the treatment of geoscientific data. These courses provide students with bedrock knowledge necessary to build an understanding of how biological, chemical, geological, and physical processes interact in the Earth system. They also provide sufficient exposure to the field to allow students to choose appropriately from the list of tracks.

REQUIRED CORE COURSES
All of the following courses:
GEOL 250 Earth History and Global Change (3 cr)
GEOL 251 Earth Surface Processes (3 cr)
GEOL 252 Earth Structure (3 cr)
GEOL 253 Earth Materials (4 cr)
Total = 13 credits
One course from the following group:
GEOL 228 Applied Geophysics for Geologists (3 cr)

Total = 3 or 4 credits

Running total = 19 credits (min); 21 credits (max)

PART 2

The tracks give students the opportunity to develop an in-depth understanding of how knowledge and scientific thinking in several fields are necessary to the development of an integrated
understanding of Earth. The geobiology track emphasizes the links and feedbacks between biological and geological processes through exposure to basic concepts of ecology, evolutionary biology, and geomicrobiology. The surface Earth processes track includes coursework which permits understanding of the range of processes occurring at and near the surface of Earth, with structured menus to allow breadth in developing an appreciation of the connections between processes. The physics of the Earth track is designed to introduce students to the physics underlying processes which occur in the solid Earth and hydrosphere.
